| Module 1: Foundations                            | • Analyze strategies to address harm associated with disparities in the perinatal setting.                                                                                                                   | 2.25                   | INP - Professional Practice (Code 6)  
LRN - Professional Practice (Code 5)  
MNN - Professional Practice (Code 4)  
NIC - Professional Practice (Code 4)  
NNP - Professional Practice (Code 5)  
WHNP - Professional Practice (Code 5)  
IAP - Professional Practice (Code 5)  
EFM - N/A                                                                                                                    |
|                                                 | • Formulate risk management and risk reduction strategies.                                                                                                                                                  |                        |                                                                                                                                                                                                        |
|                                                 | • Identify sources of perinatal liability and risk.                                                                                                                                                        |                        |                                                                                                                                                                                                        |
|                                                 | • Identify essential aspects of respectful care in perinatal settings.                                                                                                                                      |                        |                                                                                                                                                                                                        |
| Module 2: Reproductive Overview and Adaptation to | • Discuss the physical and hormonal influences of the reproductive system.                                                                                                                                | 2.50                   | INP - Fetal Assessment (Code 1)  
LRN - N/A  
MNN - Pregnancy, Birth Risk Factors and Complications (Code 1)  
NIC - N/A  
NNP - N/A  
WHNP - Normal Physiology and Wellness Management (Code 1)  
IAP - Maternal Physiology and Assessment (Code 1)  
EFM - N/A                                                                                                                    |
| Pregnancy                                       | • Discuss the definition and prevalence of infertility.                                                                                                                                                     |                        |                                                                                                                                                                                                        |
|                                                 | • Identify factors that can influence conception and adaptation to pregnancy.                                                                                                                               |                        |                                                                                                                                                                                                        |
|                                                 | • Determine the screenings and assessments that may occur during pregnancy.                                                                                                                                   |                        |                                                                                                                                                                                                        |
| Module 3: Process of Labor and Birth             | • Discuss the factors and conditions that may affect the process and outcomes of labor.                                                                                                                     | 3.50                   | INP - Labor and Birth (Code 2)  
LRN - Mother/Fetus (Code 1)  
MNN - N/A  
NIC - N/A  
NNP - N/A  
WHNP - N/A  
IAP - N/A  
EFM - N/A                                                                                                                    |
|                                                 | • Analyze the nursing care and interventions provided during each stage of labor.                                                                                                                          |                        |                                                                                                                                                                                                        |
|                                                 | • Identify techniques to support the patient with coping during labor.                                                                                                                                       |                        |                                                                                                                                                                                                        |
| Module 4: Complications of Labor and Birth       | • Formulate the plan of care for induction and augmentation of labor.                                                                                                                                       | 3.25                   | INP - Pregnancy and Obstetric Complications (Code 3)  
LRN - N/A  
MNN - N/A  
NIC - N/A  
NNP - N/A  
WHNP - N/A  
IAP - N/A  
EFM - N/A                                                                                                                    |
|                                                 | • Articulate methods to promote vaginal birth.                                                                                                                                                             |                        |                                                                                                                                                                                                        |
|                                                 | • Discuss the nursing care of the patient with abnormal labor patterns.                                                                                                                                     |                        |                                                                                                                                                                                                        |
|                                                 | • Prioritize the appropriate steps in the care of a patient with obstetric complications.                                                                                                                  |                        |                                                                                                                                                                                                        |
| Module 5: Cesarean Birth and Post Anesthesia Care| • Analyze conditions requiring cesarean birth.                                                                                                                                                            | 3.0                    | INP - Pregnancy and Obstetric Complications (Code 3)  
LRN - N/A  
MNN - N/A  
NIC - N/A  
NNP - N/A  
WHNP - N/A  
IAP - N/A  
EFM - N/A                                                                                                                    |
|                                                 | • Describe the nursing care provided for a cesarean birth in the preoperative, intraoperative, and postoperative periods.                                                                                     |                        |                                                                                                                                                                                                        |
|                                                 | • Recognize potential complications that may arise during various periods of care for a cesarean birth.                                                                                                     |                        |                                                                                                                                                                                                        |
| Module 6: Perinatal Infections | • Explain common sexually transmitted infections, symptoms, and treatment during pregnancy. • Identify nursing interventions for common perinatal infections. | 3.75 | INP - Pregnancy and Obstetric Complications (Code 3) LRN - Mother and Fetus (Code 1) MNN - Pregnancy, Birth Risk Factors and Complications (Code 1) NIC - General Assessment and Management (Code 1) NNP - General/Physical Assessment (Code 1) WHNP - Gynecologic Disorders/Deviationns (Code 2) IAP - Obstetric and Medical Complications in Pregnancy (Code 2) EFM - N/A |
| Module 7: Antepartum Complications | • Explain the risk factors associated with antepartum complications. • Distinguish the interventions in the care of patients with various antepartum complications. • Formulate the nursing plan of care for a patient with antepartum complications. | 5.25 | INP - Pregnancy and Obstetric Complications (Code 3) LRN - Mother/Fetus (Code 1) MNN - Pregnancy, Birth Risk Factors and Complications (Code 1) NIC - General Assessment (Code 1) NNP - General Physical Assessment (Code 1) WHNP - Complications of Pregnancy (Code 2) IAP - Obstetric and Medical Complications in Pregnancy (Code 2) EFM - N/A |
| Module 8: System Related Complications of Pregnancy | • Identify signs and symptoms for those affected by system-related pregnancy complications. • Discuss medical management and nursing care for system-related pregnancy complications. • Summarize maternal and fetal implications arising from system-related pregnancy complications | 3.75 | INP - Pregnancy and Obstetric Complications (Code 3) LRN - Mother/Fetus (Code 1) MNN - Pregnancy, Birth Risk Factors and Complications (Code 1) NIC - General Assessment (Code 1) NNP - General Physical Assessment (Code 1) WHNP - Complications of Pregnancy (Code 2) IAP - Obstetric and Medical Complications in Pregnancy (Code 2) EFM - N/A |
| Module 9: Postpartum Assessment and Care | • Describe the physiologic changes occurring during the postpartum period. • Identify nursing assessment and care for the postpartum patient. • Analyze the principles related to discharge and discharge teaching. | 2.75 | INP - Postpartum (Code 4) LRN - N/A MNN - Postpartum Assessment, Management and Complications (Code 2) NIC - N/A NNP - N/A WHNP - Pathophysiology/Complications of Pregnancy (Code 2) IAP - N/A EFM - N/A |
| Module 10: Postpartum Complications | • Describe abnormal physiologic changes that occur during the postpartum period. • Differentiate normal from abnormal assessment findings in the postpartum period. • Identify causes, signs and symptoms, and management of possible complications in the postpartum period. | 3.0 | INP - Postpartum (Code 4) LRN - N/A MNN - Postpartum Assessment, Management and Complications (Code 2) NIC - N/A NNP - N/A WHNP - Pathophysiology/Complications of Pregnancy (Code 2) IAP - N/A EFM - N/A |
| Module 11: Newborn Transition | • Identify physiologic changes that occur during the transition from fetal to extrauterine life. • Describe the process of immediate newborn assessment and stabilization. • Analyze risk factors for transition-related complications in the newborn. | 2.50 | INP - Newborn (Code 5) LRN - Physical Assessment and General Management (Code 2) MNN - Newborn Assessment, Management and Complications (Code 2) NIC - General Assessment (Code 1) NNP - Physical Assessment (Code 1) WHNP - N/A IAP - N/A EFM - N/A |
| Module 12: Newborn Assessment, Routine Care, and Discharge | 3.25 | INP - Newborn (Code 5)  
LRN - Newborn Complication (Code 3)  
MNN - Newborn Assessment, Management and Complications (Code 3)  
NIC - Physiology and Pathophysiology (Code 2)  
NNP - Physiology and Pathophysiology (Code 2)  
WHNP - N/A  
IAP - N/A  
EFM - N/A |
|---|---|---|
| • Describe a comprehensive newborn physical assessment using a systematic approach and identifying deviations from normal.  
• Identify routine care for a newborn, including discharge criteria and parent education. | | |
| Module 13: Newborn Nutrition | 2.25 | INP - Newborn (Code 5)  
LRN - Newborn Complication (Code 3)  
MNN - Newborn Assessment, Management and Complications (Code 3)  
NIC - Physiology and Pathophysiology (Code 2)  
NNP - Physiology and Pathophysiology (Code 2)  
WHNP - N/A  
IAP - N/A  
EFM - N/A |
| | | |
| • Describe the physiology of lactation and measures necessary for the initiation and maintenance of milk supply.  
• Identify nursing interventions to encourage and support breastfeeding.  
• Recognize indications for supplementation or formula feeding and provide support. | | |
| Module 14: Newborn Clinical Deterioration | 2.25 | INP - Newborn (Code 5)  
LRN - Newborn Complication (Code 3)  
MNN - Newborn Assessment, Management and Complications (Code 3)  
NIC - Physiology and Pathophysiology (Code 2)  
NNP - Physiology and Pathophysiology (Code 2)  
WHNP - N/A  
IAP - N/A  
EFM - N/A |
| | | |
| • Identify a newborn's potential risk factors for clinical deterioration.  
• Recognize and respond to newborn clinical deterioration. | | |
| Module 15: Newborn Conditions Affecting Care and Outcomes | 2.25 | INP - Newborn (Code 5)  
LRN - Newborn Complication (Code 3)  
MNN - Newborn Assessment, Management and Complications (Code 3)  
NIC - Physiology and Pathophysiology (Code 2)  
NNP - Physiology and Pathophysiology (Code 2)  
WHNP - N/A  
IAP - N/A  
EFM - N/A |
| | | |
| • Recognize risk factors for conditions that affect care and outcomes.  
• Identify appropriate nursing assessments and interventions to provide specialized care to high-risk newborns. | | |
| Module 16: Perinatal Loss | 3.50 | INP - Postpartum (Code 4)  
LRN - Assessment and Management of Pathophysiological Conditions and Neonatal Complications (Code 3)  
MNN - Postpartum Assessment Management and Complications (Code 2)  
NIC - Physiology and Pathophysiology (Code 2)  
NNP - Physiology and Pathophysiology (Code 2)  
WHNP - Complications of Pregnancy (Code 2)  
IAP - Obstetric and Medical Complications in Pregnancy (Code 2)  
EFM - N/A |
| | | |
| • Distinguish between types of perinatal loss and frequency of occurrence.  
• Recognize the need for individualized care in caring for patients and their families.  
• Describe the impact of perinatal loss on patients, families, and staff.  
• Articulate strategies for caring, teaching, and helping families cope with perinatal loss. | | |

*The codes listed are based on the NCC coding books. Please check to ensure codes are correct before submitting for maintenance.*
